

# MAXGEO

DataShed provides enterprise wide data management for mining and exploration companies.

maxgeo was founded by respected industry experts, wanting to unlock the real value of integrated datasets, resulting in a better insight into the business.

We work in all the major regions of the world: Australasia, Africa, Europe and Americas.

Experienced industry specialists passionate about data.

## DataShed Advantage

- Integrated systems
- Smarter, real-time decisions
- Discover hidden opportunities
- Work better together
- Report anywhere, anytime

## THE BUSINESS OF DATA MANAGEMENT

HEAD OFFICE  
Maxwell GeoServices Pty Ltd  
Level 1, 25 Cantonment Street,  
Fremantle, Western Australia 6160

AUSTRALASIA • AFRICA • EUROPE • AMERICAS

# SMART DATA MANAGEMENT

FOR EXPLORATION AND MINING COMPANIES

**maxgeo**

maxwell's data management application, DataShed integrates all operational data for mining and/or exploration business into a single platform. Adding value to your company's most important asset...data.

DataShed provides an enterprise wide data management solution for all exploration and mining activities. The disciplined flexibility of DataShed ensures it can be customised to meet each company's business requirements. A user-friendly, robust front-end enables effective, importing, storage and export of quality data. Within DataShed is a suite of powerful tools for data interpretation, and integration with other applications. The product is scalable for operation and commodity.

The Maxgeo Data Schema (MDS) is a core component to DataShed. This is where value is added to the data. The MDS has been built from years of hands on geological and mining experience and database knowledge. The MDS can be used "Out the Box" or customised to suit a client's specific data management requirements.

## FEATURES

- Drilling and Sampling Data Management
- Production Data Management
- Advanced Assay Data Management
- User Configuration
- Simple User Interface
- Intuitive Dataset Manager
- Data Importing
- Data Exporting
- Data Validation
- Data Filter and Search
- Inbuilt Spatial Search
- Grid Conversion Management
- Seamless Connectivity with other software
- Reports and Extensions
- Charting
- File Cataloguing
- Tiered Data Security

## BENEFITS

### USER FRIENDLY SOFTWARE

DataShed is designed and developed by geoscientists and IT professionals, providing a business platform that gives enterprise wide operational insights.

### AFFORDABLE

DataShed is an affordable application that is quick to implement and easy to learn, resulting in reduced overall costs.

### SEAMLESS INTEGRATION

DataShed can seamlessly integrate with a variety of mining, exploration, GIS and third party applications.

### INDUSTRY STANDARD

DataShed is a global industry standard for the exploration and mining industries.

### FLEXIBLE

DataShed provides a flexible environment that can be customised to meet a client's business requirements ... no two databases are the same.

### REDUCE RISK

DataShed improves accuracy of data and technical decisions.
